

Robert Whitfield MD, FACS

Breast Implant Illness Symptom Guide

Here is a list of common symptoms of Breast Implant Illness:

- Fatigue
- Anxiety
- Muscle and joint pain
- Hair loss
- Brain fog
- Gut problems
- Digestive issues
- Headache
- Bacterial Vaginosis
- Yeast Infection (Candida)
- Recurrent UTIs
- Weight Gain
- Bloating/ Fluid Retention
- Rashes
- Acne

Dr. Rob has seen all of these symptoms be relieved with Explant of the breast implants. **Please keep in mind** there is no test to be done to determine if someone has Breast Implant Illness. The only way to know is to have an explant and test what has been removed. Call us TODAY for your consultation.

We look forward to helping you join the 1,000's of women we've helped regain their robust health by dealing with the root cause of their health disruption and the chaos it inflicts.
